

Lab Additional Exercise

Web Application Development

- Based on lab3 and assignment 1(Personal website).
- Add at least **three forms by JSP (register profile, login and then send feedback under session before logging out)** and submit those form contents to servlets. The servlets then create a session by cookie until user logged out
- The forms must completely use the theme you are decorating your site (consistency)
- Registration data and feedback are also stored on text file at server. Propose and implement a solution to store multiple user accounts and feedbacks into text file(s).
